Our factory presets should help you get started with your BASS V-AMP/BASS V-AMP PRO and give you a good basis for programming your own tones. The preset names are stored with the data and are meant to give you a rough idea of the tone and possible application. Of course, you can also rename the presets using the editor software (V-Amp Design 2.0) available at www.v-amp.com or www.behringer.com. Enjoy!
